

Techno-Libertarian Realism

Georgie Nettell

May 27 - July 12, 2026

Wednesday - Saturday, 12 - 6pm

The world of modern industry is a vast, multidimensional expansion, the epic exuberance of which cannot be slowed. Nations, corporations and high IQ individuals compete to envision technologies audacious enough to tilt the global balance. This is the engine of the world economy - the brutal processes of the market spur billions to work hard, invent, trade, and in doing so unleash spectacular progress and growth. Where there is volatility, there is opportunity, catastrophic and glorious, driving us unrelentingly forwards towards the next Industrial Revolution

Checklist left to right:

1. War and Venture Capital, 2026, pen on paper, 50 X 70 cm. Golf club and custom printed golf ball (L3Harris Technologies - multi-domain defense technology innovator and systems integrator)
